Neuroprotective potential of stem cells in models of neurodegenerative diseases

Main interest of the team: regulation of astrocytic glutamate transporters & role in neurological disorders.

Aim of this project: Characterization of the differentiation of mesenchymal stem cells into astrocytes and evaluation of the neuroprotective role of these cells in models of neurodegenerative diseases (amyotrophic lateral sclerosis and Parkinson disease).

Key Words: Stem cells, Astrocytes, Neurodegenerative disease, Neuroprotection

Examples of related publications from the group:

Salary: approx 1400 euros NET + mobility allowance

How to Apply: CV + motivation letter + references at emmanuel.hermans@farl.ucl.ac.be
