

IDDI (International Drug Development Institute) is an international company specialized in biostatistical and eClinical services in the field of clinical research, headquartered in Belgium with offices in Boston. We are looking to fill the following position for our Ottignies Louvain-La-Neuve office:

Biostatistician for an innovative research project

Responsibilities

The candidate will coordinate and perform research within the framework of a project aimed at the discovery and validation of biomarkers for Alzheimer's disease. The project includes both methodological (development of novel approaches to validation of biomarkers by using historical data) and applied (application of the developed methodology to existing experimental and clinical data) aspects.

Profile

- Master or PhD in biostatistics, statistics or mathematics
- Previous experience in clinical research preferable
- Extensive experience in the use of statistical/mathematical software such as SAS, R, Matlab is strongly recommended
- Good knowledge of English language, written and spoken
- Problem solving skills, team player, organized and focused
- Thinks analytically and creatively
- Enjoys working in a multidisciplinary environment (statistics, computer sciences, molecular biology, biochemistry).
