

5.0 credits	30.0 h + 30.0 h	2q
-------------	-----------------	----

Teacher(s) :	Legat Jean-Didier ;
Language :	Anglais
Place of the course	Louvain-la-Neuve
Inline resources:	 > http://moodleucl.uclouvain.be/course/index.php?categoryid=10
Main themes :	<p>-- Introduction to Verilog (for who did not follow LELEC 2531 students) -- Embedded processors and "soft-core" like Nios or MicroBlaze on FPGA -- Standard devices of a processor and development of a dedicated device -- Adding specialized instructions ("custom instructions") to the processor architecture -- Architecture of a dual-core system. Communication between cores -- Real-time operating systems: characterization and comparison -- In-depth analysis of a real-time OS open-source (eg MicroC-OS/II) -- Programming methodology of an application on a real-time OS -- Embedded Linux. Development of driver -- Implementation of a wireless module connected to the FPGA board</p>
Aims :	<p>Given the learning outcomes of the "Master in Computer Science and Engineering" program, this course contributes to the development, acquisition and evaluation of the following learning outcomes:</p> <p>-- INFO1.1-3 -- INFO2.2-4 -- INFO5.2, INFO5.4-5 -- INFO6.3</p> <p>Given the learning outcomes of the "Master [120] in Computer Science" program, this course contributes to the development, acquisition and evaluation of the following learning outcomes:</p> <p>-- SINF1.M1 -- SINF2.2-4 -- SINF5.2, SINF5.4-5 -- SINF6.3</p> <p>Students completing this course successfully will be able to</p> <p>-- implement a multi-core system on FPGA using a Nios or MicroBlaze soft-core including peripherals, memories, caches, ... -- make an argued choice between RTOS running on a multi-core system -- use an RTOS running on a multi-core systems by taking advantage of his strengths -- program effectively an application with real-time constraints by implementing a rigorous methodology.</p> <p><i>The contribution of this Teaching Unit to the development and command of the skills and learning outcomes of the programme(s) can be accessed at the end of this sheet, in the section entitled "Programmes/courses offering this Teaching Unit".</i></p>

Evaluation methods :	The methods of assessment are defined on the course website on Moodle
Teaching methods :	The teaching method includes lecture sessions where the main issues are explained. The implementation is done through assignments that students perform individually or in groups. A FPGA card containing an Altera Cyclone is given to each student in the course so that it can develop a personal expertise. The entire software suite (Quartus, ModelSim, Eclipse, MicroC--OS/II ...) is free.
Bibliography :	-- Digital Design and Computer Architecture 2nd Ed. - David Money Harris & mp; Sarah L. Harris Morgan Kaufmann Publishers - 2012 - ISBN: 978-0-12-394424-5 -- MicroC OS II: The Real Time Kernel - Jean J. Labrosse
Other infos :	Background: -- LFSAB1202 or LSINF1140: basic electronics -- LFSAB1402: basic programming -- It is useful but not mandatory to have followed the course LELEC 2531 - Design and architecture of digital electronic systems
Cycle and year of study :	> Master [120] in Computer Science > Master [120] in Computer Science and Engineering > Master [120] in Electro-mechanical Engineering > Master [120] in Electrical Engineering
Faculty or entity in charge:	INFO
