UCL LMAPR2018 Université catholique de Louvain

Rheometry and Polymer Processing

5.0 credits

2016-2017

30.0 h + 22.5 h

2q

Teacher(s) :	Bailly Christian ; Van Ruymbeke Evelyne ;					
Language :	Anglais					
Place of the course	Louvain-la-Neuve					
Inline resources:	Moodle website : <a>https://moodleucl.uclouvain.be/course/view.php?id=8851					
Prerequisites :	The prerequisite(s) for this Teaching Unit (Unité d'enseignement – UE) for the programmes/courses that offer this Teaching Unit are specified at the end of this sheet.					
Main themes :	 I. Introduction : industrial polymer processing, non Newtonian fluids, continuum mechanics refresher II. Shear viscosity, normal forces and elongational viscosity: observations and phenomenological models III. Flow through a channel IV. Capillary rheometry and extrusion defects V. Origin of viscoelastic effects; notions of rheological models; introduction to processing flow simulation VI. Cone-plate and plate-plate rheometric flow; Elongational flow VII Major industrial polymer processing operations : rheological aspects, technology and applications 					
Aims :	Contribution of the course to the program objectives With respect to the LO of the programme KIMA, this activity contributes to the development and acquisition of the following LO: 					

Evaluation methods : The students will be individually graded based on the objectives indicated above. More precisely, the evaluation involves the grading of :		
course content. This project will carry 1/3 of the total mark. A report on a laboratory and/or a simulation projet on polymer processing or theometry. This report will carry 1/6 of the total mark. An oral exam based on a list of synthetic questions prepared by the teachers and given during the year. The exam will carry 50% of the mark The teachers have the right to reduce the weight of one part of the mark if a deep deficiency (& t.8/20) is found for the other. Teaching methods : A combination of : Ex cathedra courses : concepts are illustrated by concrete exemples taken from industrial practice and the experience of the teachers. Rheometry laboratory and/or processing simulation project L Introduction : industrial polymer processing, non Newtonian fluids, continuum mechanics refresher II. Flow through a channel IV. Capillary theometry and extrusion defects V. Origin of viscoelastic effects; notions of theological models; introduction to processing flow simulation VI. Capellary theometry and extrusion defects V. Origin of viscoelastic effects; notions of theological aspects, technology and applications WI Major industrial polymer processing operations : theological aspects, technology and applications	Evaluation methods :	
An oral exam based on a list of synthetic questions prepared by the teachers and given during the year. The exam will carry 50% of the mark. Teaching methods : A combination of : Ex cathedra courses : concepts are illustrated by concrete exemples taken from industrial practice and the experience of the teachers. The teachers have the right to reduce the weight of one part of the mark if a deep deficiency (& t.8/20) is found for the other. Teaching methods : A combination of : Ex cathedra courses : concepts are illustrated by concrete exemples taken from industrial practice and the experience of the teachers. The memetry laboratory and/or processing simulation project : Exeminars prepared and presented by the students : Laboratory and plant visits Content : I. Introduction : industrial polymer processing, non Newtonian fluids, continuum mechanics refresher III. Flow through a channel IV. Capillary theometry and extrusion defects V. Origin of viscoelastic effects; notions of theological models; introduction to processing flow simulation VI. Come-plate and plate-plate theometric tow; Elongational flow VI. Major industrial polymer processing operations : rheological aspects, technology and applications Bibliography : Lecture notes on Moodle, books from library according to subjects Other infos : This course requires basic knowledge of polymer science and continuum mechanics		
of the mark - The teachers have the right to reduce the weight of one part of the mark if a deep deficiency (& t;8/20) is found for the other. Teaching methods : A combination of : 		A report on a laboratory and/or a simulation projet on polymer processing or rheometry. This report will carry 1/6 of the total mark.
Teaching methods : A combination of : Ex cathedra courses : concepts are illustrated by concrete exemples taken from industrial practice and the experience of the teachers. Rheometry laboratory and/or processing simulation project Rheometry laboratory and/or processing, simulation project Laboratory and plant visits Content : I. Introduction : industrial polymer processing, non Newtonian fluids, continuum mechanics refresher II. Shear viscosity, normal forces and elongational viscosity: observations and phenomenological models IV. Capillary theometry and extrusion defects V. Origin of viscoelastic effects; notions of theological models; introduction to processing flow simulation vi Cone-plate and plate-plate rheometric flow; Elongational flow Bibliography : Lecture notes on Moodle, books from library according to subjects Other infos : This course requires basic knowledge of polymer science and continuum mechanics Faculty or entity in FYKI		
Teaching methods . Ex cathedra courses : concepts are illustrated by concrete exemples taken from industrial practice and the experience of the teachers. Rheometry laboratory and/or processing simulation project Remometry laboratory and/or processing simulation project Expendence Laboratory and plant visits Content : I. Introduction : industrial polymer processing, non Newtonian fluids, continuum mechanics refresher II. Shear viscosity, normal forces and elongational viscosity: observations and phenomenological models III. Flow through a channel IV. Capillary rheometry and extrusion defects V. Origin of viscoelastic effects; notions of rheological models; introduction to processing flow simulation VI. Capillary rheometry and plate-plate rheometric flow; Elongational flow VII Major industrial polymer processing operations : rheological aspects, technology and applications Bibliography : Lecture notes on Moodle, books from library according to subjects Other infos : This course requires basic knowledge of polymer science and continuum mechanics Faculty or entity in FYKI		The teachers have the right to reduce the weight of one part of the mark if a deep deficiency (& t;8/20) is found for the other.
